

## What Can I Expect From Your Classes?

Here at Submersion SCUBA we do things a little different than you will find anywhere else. Since all of our classes are private or semi-private classes you don't have to worry about being left out in the back of the room. With our flexible schedules you don't have to worry about missing a class due to an emergency.

Not only do we meet the minimum standards for your certification we exceed them in nearly every aspect of your course so you don't have to worry about just getting the bare minimum and then being on your way.

All of the equipment that we use is all new top of the line equipment. As you will learn in your course there are multiple equipment configurations available to you. Some are better than others, they all have their own pro's and con's.

We have elected to invest in higher end gear to teach you using more advanced equipment right from the start. You will be using what all of our instructors use and trust. So you don't have to worry about being tossed into cheap equipment that we would not even use ourselves. Our methods of training and gear selection is greatly derived from the technical diving field. We have taken our experience from that and transitioned it over to recreational diving. So yes you will notice a difference between what you will see from us and what will be readily available to you at the other local dive shops. Our equipment selection is becoming more and more popular with the recreational market due to the fact that it's proven, and works.

We will start you off diving in all Dive Rite equipment. You will be using a rigid back plate, single tank wing, hogarithian style harness. Your regulators will be configured with a 7' primary and a short bungied backup. You won't be using bulky consoles, you are provided with a wrist worn computer to use for your class.

We can guarantee you that you will not find any other shops in the area that provide this quality of equipment or setup for their students. Why? Because it's cheaper for them to put you into 'standard' gear. We don't believe that you can put a dollar amount on quality education.
